Education

University of Washington, Paul G. Allen School — Seattle, WA
Computer Science, B.S. — *Sep. 2025 – Mar. 2028 (Planned)*
Annual Dean's List. Major GPA: 4.00

Bellevue College — Bellevue, WA
Running Start / Dual Credit — *Sep. 2024 – June 2025*

Newport Cisco Networking Academy — Bellevue, WA

Completed a detailed set of technical write-ups on a variety of networking protocols while learning in a hands-on laboratory environment.

Experience

UW Autonomous Flight Team — Oct. 2025 – Present
Engineer – Controls, Systems, and Electronics — *Seattle, WA*

- Developed key systems for fixed-wing and quadcopter autonomous aircraft in a team environment. Researched and selected sensors for aircraft, and developed key sensor integration systems. Built and managed the organization's Git repository structure, including creating automatic tests to run when code was pushed. Performed field tests to ensure the viability of sensor and radio infrastructure for in-flight telemetry and control.

Bellevue School District — July – August 2026, 2025, 2024
Summer Technical Support — *Bellevue, WA*

- Unboxed, imaged and deployed thousands of district-issued Windows laptops and hundreds of iPad devices across 28 schools, routinely moving pallets and boxes of equipment. Offboarded legacy devices and securely erased confidential student data.

Rotary Club of Antigua — Feb 2025, 2024
Network Implementation Project Manager / IT Specialist — *St. John's, Antigua and Barbuda*

- Led a team of students to install and update networks for schools and NGOs, planning network designs and coordinating tasks and equipment across locations

Newport HS Robotics Group — Sep. 2022 – June 2025
IT Captain, Programming Lead — *Bellevue, WA*

- Led a team to build a strategy system for robotics competitions: a cross-platform Flutter scouting app paired with a Java (Spring Boot) server application, syncing data instantly between scouters, strategy, and drive teams. Rebuilt and regularly maintained the team's website.

Projects

Network Telemetry & Anomaly Detection | *containerlab, FRR, Netmiko, TimescaleDB, Python* — In progress

- Built a containerized hub-and-spoke network lab of FRR routers running OSPF, and a Netmiko-based collector that stores time-series telemetry in TimescaleDB.
- Developing an ML anomaly detection layer with SHAP explainability to flag abnormal network behavior.

Skills

Programming: Python, Java, C++, SQL, Bash, Dart, Flutter, Spring Boot
Backend & Cloud: REST APIs, Client-Server Architecture, Containers (containerlab), AWS, SQLite, TimescaleDB, Git, CI/test automation, Linux (Debian, Arch), systemd
Networking: TCP/IP, DNS, DHCP, OSPF, BGP, WPA, Cisco IOS, Tailscale, Network Telemetry
Other: RTOS, Embedded Systems, MDT, Device Lifecycle Management, Technical Documentation

Certifications

CCNA | CompTIA Security+ | AWS Certified Cloud Practitioner
